Launch of BCN Health Booster

The Park and the Barcelona City Council launched BCN Health Booster, an acceleration programme to promote eleven emerging companies with an innovative business project with social impact in the field of health, which will be accompanied by Barcelona Activa and receive business support from Biocat.

Park completes coffee corners project, recognising its international community

The PCB wanted to recognise the wealth and diversity of nationalities at the Park with a small tribute to the largest groups of foreign nationalities among the users. To do so, and to provide additional common areas at the Park, several artistic interventions were carried out in spaces in the Cluster II building, known as the coffee corners, with illustrations of characteristic café scenes from each country represented by local artists.

Editorial

Maria Terrades
CEO, Barcelona Science Park

In 2021, we witnessed the consolidation of growth in the life sciences and healthcare sector in Catalonia, which now makes up 8.7% of the GDP and has attracted €238 million in investment in innovative start-ups and spin-offs.

The evolution of the Barcelona Science Park and its Community in 2021 was quite similar to the previous year: 14 new organisations, growth in activity at most of the organisations in the Park and growth of the Park itself with 1,500 m² of laboratory and office spaces occupied by clients. At the end of 2021, the Park was fully occupied in its furnished spaces and near full occupancy of all its spaces, consolidating its place as one of the cornerstones of the sector in our country.

A significant fact from 2021, through which the PCB is also helping drive this strategic sector and to which we are dedicating this year's Annual Report, is the launch of the BCN Health Booster accelerator with the Barcelona City Council and Barcelona Activa, with support from Biocat. This acceleration programme supports emerging companies with innovative business projects that have a social impact in the healthcare arena. Of the eleven companies selected, seven are in the therapeutics discovery phase, three are developing diagnostic tools for various diseases and one is designing biomaterials for the health sector.

Thanks to all the hard work put in by the Park team, we were able to secure both strong growth in important areas like ongoing renovations of infrastructures and science equipment and inaugurate new common areas, such as the six coffee corners dedicated to the six biggest foreign communities at the Park. We continued our dedication to quality, expanding the scope of our ISO 9001 and 14001 quality certification to the animal house, which means all Park services are now

certified to comply with those standards. Plus, we have reaffirmed our commitment to the Sustainable Development Goals (SDG) by implementing energy-saving measures and adding a section on "Sustainable development" to our weekly newsletter T'Interessa.

We've worked once again this year to dynamise our ecosystem with hybrid events, in person and online, over the months with the strictest restrictions; and continued with the Research in Society programme, which aims to bring science to the people and encourage young people to go into science, with 4.900 participants aged between 10 and 18.

We remain committed to training PCB employees, who did 3.480 hours of training including a course on how to use Microsoft 365, a tool we rolled out in 2021.

On an economic level, we closed the year with solvent figures; income of €20.2 million, net profits of €2.5 million and paid down debt to €80.3 million.

It is difficult to sum up all the most salient points of the year in a short introduction, so I encourage you to read this 2021 Annual Report, where you will find much more information.

To finish off, I would like to thank everyone that makes up the Park team for their dedication and excellent work in a highly demanding environment, and all the members of the PCB Community for their hard work and participation, making our ecosystem stronger every day.

Thanks to all the hard work put in by the Park team, we were able to secure both strong growth in important areas like ongoing renovations of infrastructures and science equipment and inaugurate new common areas, such as the six coffee corners dedicated to the six biggest foreign communities at the Park.

BCN Health Booster

The Park and the Barcelona City Council launched BCN Health Booster, an acceleration programme to promote eleven emerging companies with an innovative business project with social impact in the field of health, which will be accompanied by Barcelona Activa and receive business support from Biocat.

Group photo with the CEOs of the companies that are part of the BCN Health Booster programme

Strategic focal points of the programme

- **Discounted rates on Park labs:** The Park provides participants with eleven laboratories with discounts on rent and general services for three years. The programme covers 65% the first year, 40% the second and 20% the third.
- **Free business guidance programme:** The companies also have access to a business guidance programme run by Bio-cat for the three years, which totally adapts to the needs and challenges each one faces, including personalised mentors-hip and consultancy services and training.
- **Assessment:** The expert panel valued highly the companies with the best chances of technical and financial viability, an experienced founding team and a chance to impact society, prioritising spin-offs from research centres, hospitals and universities.

Companies selected

- Five of the companies selected (45%) are spin-offs of research centres of excellence:

Bellvitge Biomedical Research Institute, IDIBELL

IRB Barcelona

IRB Barcelona

Vall d'Hebron Research Institute-VHIR

Josep Carreras Leukaemia Research Institute

- The other six are start-ups with innovative business projects in the field of health:

Activities and indications

Of the eleven companies selected, seven are in the therapeutics discovery phase, three are developing diagnostic tools for various diseases and one is designing biomaterials for the health sector.

More than half the companies taking part in the accelerator (64%) work in the field of oncology, whether searching for treatment solutions or working on early diagnosis of cancer. The rest are developing products to detect infectious diseases, drug delivery systems for chronic conditions, and drug discovery for various fibrotic diseases.

■ R&D on therapeutic products

Oncology · Ewing sarcoma

Oncology · Castration-resistant prostate cancer

Oncology · Metastasis

Oncology · Paediatric cancer

Oncology · Leukaemia

Fibrotic Diseases

Chronic Diseases

■ R&D on diagnostic tools

Oncology · Women's health

Oncology · Women's health

Infectious diseases · Sepsis

■ Medical devices

Biomaterials and bioplastics

Initial funding

The 11 companies have jointly raised initial funding of €43 million. Excluding the €30-million round by Ona Therapeutics, each company has between €600.000 and €3.5 million in start-up capital for its projects. The funding rounds over €1.5 million included international investors, which is in line with the growing foreign interest in investing in the sector in Catalonia.

Female leadership

Over half of the companies (55%) are led by women, who are either the founders or in various leadership positions, such as Chief Scientific Officer (CSO), Chief Technology Officer (CTO) or Chief Financial Officer (CFO).

A million to promote entrepreneurship and innovation in health

The Barcelona City Council's contribution to the project is €469.000, €343.240 of which will go to cover the discounted rent on the laboratories and €126.000 to funding the Biocat business support programme. The Park has invested €694.000 to furnish the new laboratories.

Budget

Aptadel Therapeutics is a spin-off of the Bellvitge Biomedical Research Institute (IDIBELL) that focuses on developing cancer treatments using aptamer-based technology. The main indication of Aptadel is for Ewing sarcoma, a rare type of cancer that affects children.

Artificial Nature is a bioengineering company that is developing and producing advanced biomaterials and bioplastics for the health technology and microelectronics sectors, using a combination of molecular technology, green chemistry and artificial intelligence.

The Foundation

The Barcelona Science Park Foundation is part of the UB Group and an initiative sponsored by the University of Barcelona which took shape in 1997. The Foundation engages in activities related to research, enhancing the quality of research and, mainly, keeping the University of Barcelona in touch with society's new needs and situations in order to achieve overarching university objectives.

The University of Barcelona enhances its public service role through the Foundation by using its scientific and technical capabilities to benefit society.

The Foundation's aims:

Manage and develop a science park with the spaces and human and physical infrastructures needed to allow users to carry out basic and applied research, innovation, and technology and knowledge transfer.

Foster measures to make the university's innovation and research work more efficient and improve its interactions with other research groups, companies and institutions.

Create an outstanding environment to drive innovation and technology transfer activities.

Mission

Promote research, knowledge transfer and innovation in the public and private sectors via smart management of spaces, technology, and relationships and dialogue within the Park Community.

Vision

Become an international benchmark in public/private research to boost Catalonia's scientific leadership, economic growth and potential to attract talent.

Values

- Communication
- Commitment
- Responsibility
- Passion
- Teamwork

Organisation chart

Board of Trustees

Chair

Joan Guàrdia Olmos

Rector of the University of Barcelona

The Barcelona Science Park Foundation was created in 1997 at the initiative of the University of Barcelona. Its Board of Trustees from the session held on 16 December 2021 is comprised of:

First Deputy Chair

■ **Joan Corominas Guerin**

President of the Social Council of the University of Barcelona

Second Deputy Chair

■ **Olga Lanau Rami**

General Manager UB Group

Secretary

■ **Marina Solé Català**

General Secretary of the University of Barcelona

Non-trustee Deputy Secretary

■ **Miquel Amorós March**

Secretary of the Social Council of the University of Barcelona

Members representing the University of Barcelona

■ **Glòria Matalí Costa**

General Manager of the University of Barcelona

■ **Jordi Garcia Fernández**

Vice-Rector for Research of the University of Barcelona

Member appointed by the Barcelona City Council

■ **Jordi Martí Grau**

Deputy Mayor for Culture, Education, Science and Community

Member appointed by the Social Council of the University of Barcelona

■ **Francesc Boada Pallerés**

Member appointed by the Bosch i Gimpera Foundation

■ **M. Carme Verdaguer Montanyà**

Director General of the Bosch i Gimpera Foundation

Members appointed by the Government of Catalonia

■ **Joan Gómez Pallarès**

Director General for Research

■ **Xavier Aldeguer Manté**

Director General of Knowledge Transfer

Member appointed by the Spanish National Research Council (CSIC)

■ **Rosa Menéndez López**

President of the CSIC

Team

Over the course of 2021, there was an average of 88 people on staff, six percent fewer than the average for the previous year due to the closing and reorganisation of the Analysis and Chemistry Platform in December 2020, and the average age is on the rise. The Park has a stable staff, with low rotation, and the same gender distribution as the previous year, with more women than men.

TOTAL 85

Training and development

A project was carried out to implement and roll out Microsoft 365 to all Park staff. The training particularly emphasised the Teams, OneDrive and SharePoint tools to create a collaborative digital environment that helps simplify tasks, facilitate team work, share information and boost efficiency.

44

Total training actions

3480

Total training hours

New welcome plan

The new Park Welcome Plan is now operational, helping new members of Park staff to integrate better and more quickly into the work team.

Telecommuting

After the telecommuting pilot programme was completed with positive results, the Telecommuting Programme was launched in January for positions that have been deemed apt for distance working. A total of 43 people have signed up for the programme and now work remotely one day a week. This programme is in addition to the intermittent periods when telecommuting has been more widely promoted due to the pandemic.

Career plan project

The Career Plan project was kicked off to identify and analyse workers' evolution in their jobs on two axes: horizontal and/or vertical promotion and growth within the same position. The first of three phases of the project has begun, "knowing the organisation". Work will continue to finish designing the Plan in 2022.

Collective bargaining

In January, the second Collective Bargaining Agreement went into effect, valid through 2023. Over the course of the year, a total of six meetings were held between the Works Council and Park Management.

Works council elections

On 18 November, elections were held to choose new members of the Works Council, which is now made up of three women and two men who will each serve a four-year term.

Training

Age

Average age 47

Quality, Security and Environment

Workplace safety

Over the course of the year, extraordinary measures were in place to stop the spread of Covid-19 in line with the ever-changing regulations current at any given time.

The chapter on General Services covers the many works carried out in 2021 to furnish new laboratories in the Cluster II building. This activity, along with the regular renovations of existing spaces, made it necessary to ensure the workplace health and safety of the workers from companies associated with these activities.

Lifelines were installed on the Helix building for tasks to maintain and clean the outside of the building, which previously had to be done from the inside.

Quality

Work has been done to bring the activities of the Animal House under the integrated quality and environmental certificates of ISO 9001 and 14001. With this certification, all the PCB services are finally ISO 9001 and 14001 certified.

Environment

Energy savings and efficiency measures implemented over the course of the year

Three large machines to produce cold water for improved HVAC performance were replaced, with total cooling power of 3.500 kW. As the new devices are more energy efficient, this will save approximately 1.000.000 kWh of electricity each year and 200 tonnes of CO₂ emissions.

All the renovated and newly furnished spaces have LED lighting. The energy saved by renovating spaces in 2021 was 130.000 kWh.

Commitment to the circular economy, reusing materials and preventing waste

Furniture in good conditions. Through the organisation Pont Solidari, 34 cupboards, 9 shelving units, 11 drawer units and 5 chairs were donated to NGOs and foundations.

Refrigeration blocks from transporting frozen samples. This material isn't manipulated, doesn't break down and maintains its cooling capacity. Fortnightly, the Park sends these blocks to three companies that reuse them ad infinitum.

Old, obsolete or unrepairable science equipment. In recent years, the film sector has shown interest in equipment that is no longer viable for scientific purposes but can be useful for film sets. The Park has provided aesthetically desirable equipment, thereby avoiding the production of waste.

Raising awareness of the SDG

The weekly chapter on Sustainable development in the Park newsletter shares messages and tips in line with the Sustainable Development Goals (SDG). This has been published since 2017 and is widely accepted and followed by the Park Community.

A summary of the other recurring activities about the SDG the Park carries out can be found in the 2019 Annual Report.

The Park in the media

The Park has finished the project to launch its new website and Intranet. This change improved the structure of the information and browsing experience for users, but also led to a change in web traffic. This decrease is common when changing websites and gradually corrects itself as the new page gets indexed, a process that will be carried out in 2022.

The publication of news increased slightly compared to the previous year, while media impacts dropped from previous years, when there were over 1.000 annually. This decrease is due to the fact that fewer campaigns were sent out to the media because of the exceptional situation caused by the pandemic, which led to a drop in demand for this service.

News items and press releases raise awareness of the activity of Park organisations in several areas: scientific production, economic activity, organisational or strategic activity and alliances. The Park Communication Department drafts a welcome piece for each new company that joins the Park and offers them the chance to publish one press release per year.

New Intranet

The Park launched a new Intranet, culminating the project to update its digital image publicly, with the new website launched in 2020, and internally, with the new Intranet. It gives users a much more attractive and up-to-date design, rational presentation of information with new contents, and a better user experience.

	2017	2018	2019	2020	2021
Annual visits to www.pcb.ub.edu	107.155	111.869	107.986	103.111	64.120
News items posted on the website	128	145	148	134	141
General press, trade press and sector websites	1.129	1.141	1.073	1.152	930

Social networks

In terms of social media, the Park saw more followers on all profiles, with a particularly noteworthy increase on LinkedIn, which is the network with the most followers and where efforts have been concentrated through a content strategy that works to bring visibility to the news posted on the Park website and the events organised. On Twitter, the upward

trend in new followers has consolidated, with 1.000 new followers a year. 2021 also saw the growth trend consolidate on Instagram, which has become the best channel for raising awareness of the Scientific Dissemination activities. This commitment to Instagram will be accompanied by a distancing from the Facebook account, which shows clear signs of stagnation and will be closed at the end of the year.

Maria Terrades, directora general del Parc Científic de Barcelona

Ajuntament: acceleradora amb el PCB i Biocat

■ L'Ajuntament i el Parc Científic de Barcelona (PCB) han posat en marxa BCN Health Booster, un programa d'acceleració per impulsar empreses emergents que tinguin un projecte de negoci innovador dins de l'àmbit de ciències de la vida. Maria Terrades,

directora general del Parc, assenya que el programa inclou la subvenció del lloguer durant tres anys, així com l'acompanyament de Barcelona Activa i el suport empresarial de Biocat per dissenyar el pla de negoci i captar inversors. L'Ajuntament aporta a l'acce-

leradora 469.000 euros, dels quals 343.000 € es destinaran a subvencionar parcialment els lloguers, i 126.000 € a finançar el programa de suport empresarial de Biocat. El Parc destinarà al projecte 527 m² de laboratoris de l'edifici Clúster II, en els quals invertirà 685.000 euros.

parc científic de barcelona

PCB, un ecosistema de investigació, transferència tecnològica e innovació

Xavier Baulista / PCB

El Parc Científic de Barcelona és uno de los centros europeos de referencia en investigación, transferencia tecnológica e innovación. Cuenta con más de 100.000 m² construidos y unos 3.000 profesionales que trabajan principalmente en el sector de la vida y la salud, desde farmacia hasta cosmética, pasando por biotecnología, tecnologías médicas y alimentación.

El Parc Científic de Barcelona (PCB) està situat en Barcelona, des de 1997, convertint-se en el primer parc científic d'Espanya.

El PCB defineix la seva missió com: "potenciar la investigació, la transferència de coneixement i la innovació del sector públic i privat, mitjançant una gestió intel·ligent de l'espai, la oferta tecnològica i del foment de les relacions i el diàleg de la comunitat PCB".

A través de la seva missió, el PCB tracta de ser una comunitat d'innovació de referència a escala internacional que com-

Las instalaciones que el PCB pone a disposición de la comunidad científica incluyen laboratorios equipados listos para trabajar en ellos

La directora general de PCB, Maria Terrades.

PCB se alia con el Ayuntamiento para lanzar una aceleradora

G. Trindade, Barcelona. El Parc Científic de Barcelona (PCB) i el Ajuntament se han aliado para lanzar el BCN Health Booster, un programa de aceleración para impulsar startups innovadoras en el ámbito de la salud, con el acompañamiento de Barcelona Activa y con el apoyo empresarial de Biocat.

La iniciativa seleccionará once proyectos empresariales de reciente creación para acceder durante tres años a un laboratorio dentro del PCB, con formación y asesoramiento gratuitos de la mano de un equipo de expertos. En concreto, podrán presentarse al proyecto empresas con menos de cinco años de vida que desarrollen productos farmacéuticos o dispositivos médicos, así como compañías de servicios dirigidas al sector de la salud que requieran el uso de un laboratorio para sus actividades. BCN Health Booster cuenta con un presupuesto agregado de un millón de euros. El consistori destinarà 468.936 euros a subvencionar parcialment els alquilers i a finançar el programa de suport empresarial de Biocat, mentre que el PCB ha invertit 685.334 euros per remodelar i acondicionar los espacios del edificio Clúster II.

Inversión tecnológica de nueve millones en el Parc Científic

J.O. Barcelona. La Universitat de Barcelona (UB) ha recibido una subvención de 8,9 millones de euros del Ministerio de Ciencia e Innovación para la adquisición e instalación del primer aparato de resonancia magnética nuclear de muy alto campo de España.

El equipo se instalará en el Parc Científic de Barcelona (PCB) - dependiente de la UB -, en un edificio diseñado específicamente para aparatos con grandes campos magnéticos. La resonancia magnética nuclear (RMN) es una tecnología clave para la investigación en química, farmacia y biomedicina, áreas en las que la UB es líder, según señaló ayer Joan Guàrdia, rector de la institución académica. Junto a otras técnicas complementarias que ya existen en la red de infraestructuras científicas de la UB, el nuevo equipo de RMN "permitirá crear el principal hub de biología estructural del sur de Europa y potenciará campos emergentes de aplicación, como el uso de proteínas desordenadas como dianas terapéuticas a los fármacos de origen biotecnológico", indicó Jordi García, vicerrector de investigación. La subvención del Gobierno cubre en su totalidad la inversión que supone el nuevo aparato de RMN.

CIÈNCIA

La primera edició de la BCN Health Booster, que compta amb una inversió d'un milió d'euros, acollirà 11 projectes innovadors i d'alt impacte social al Parc Científic de la UB.

BCN inaugura una acceleradora d'empreses emergents sanitàries

EL PERIÓDICO Barcelona

L'Ajuntament de Barcelona i el Parc Científic de la UB van inaugurar ahir la BCN Health Booster, acceleradora d'empreses emergents de salut, que en la seva primera edició acollirà 11 projectes innovadors i d'alt impacte social. L'alcalde, Ada Colau, el primer tinent d'alcalde de Barcelona, Jaume Collboni, i el rector de la UB, Joan Guàrdia, van donar el tret de sortida a una iniciativa que compta amb una inversió de més d'un milió d'euros.

BCN Health Booster neix en el context del Pla Barcelona Ciència, impulsat pel consistori, com un

Ajuntament de Barcelona

Jaume Collboni, el rector Joan Guàrdia, Ada Colau i Maria Terrades, directora del Parc Científic, ahir a l'acte.

exemple de la col·laboració entre centres públics, empreses, universitats i administracions per promoure la innovació en salut i el retorn a la societat de la inversió en investigació. Ubicada al Parc Científic, té 527 metres quadrats, on les 11 empreses tindran, durant tres anys, accés bonificat a laboratoris d'ús únic o compartit, equipament científic i infraestructures d'última generació. I gràcies a Biocat, es beneficiaran d'un pla d'acompanyament empresarial adaptat als seus reptes.

19 candidatures

De les 11 empreses elegides, de 19 candidatures, set estan en fase de descobriment de productes terapèutics -per a diferents tipus de càncer, malalties cròniques o fibrotiques-, tres desenvolupen eines de diagnòstic i una treballa en el disseny de biomaterials.

«BCN Health Booster impulsa la ciència i la investigació com a motor d'un nou model econòmic i social que generi més benestar», va remarcar Colau. Collboni va remarcar que el consistori ha fet una aposta ferma per impulsar la ciència. I per al rector de la UB, és una nova peça del necessari entramat entre investigació, transferència i impacte social imprescindibles per al desenvolupament de la ciutat. ■

Una alumna de l'escola Arrels és premiada a l'Exporecerca per un estudi sobre el lupus

► Adria Flotats, de 16 anys, va ser la tercera classificada a la fira de recerca internacional on joves de tot el món presenten les seves investigacions

Adria Flotats durant l'exposició del seu projecte

la investigació. Flotats va realitzar entrevistes i qüestionaris a especialistes, membres de les juntes de les associacions de malalts de lupus d'arreu dels països, pacients i familiars de pacients.

El treball de Flotats va ser reconegut a la fira internacional del comerç, en la qual va rebre dos premis dels patrocinadors: el Premi del Parc Científic de Barcelona i el de la Societat Catalana de Pedagogia. A més, el treball de Flotats va ser reconegut amb una de les vint seleccions per presentar el seu treball a la fira.

Flotats explica que el seu primer contacte amb la temàtica de la investigació la feu en entrar al projecte d'investigació de la Medicina i la Biologia, un programa organitzat per la Fundació Catalana de la Pedagogia que ofereix algunes estudiant de primer de batxillerat de la Universitat de Barcelona.

Aquest programa els ofereix, com a treball, un treball en un centre de recerca biomèdica de referència. «Gràcies al programa he pogut fer la

Flotats va fer una comparativa dels aspectes mèdics i socials del lupus a Espanya i al Regne Unit.

Medicina vaig conèixer a l'Alícia Bernal, una internista especialista en la malaltia del lupus a l'Hospital Clínic de Barcelona. Corres en va parlar del lupus i vaig veure que és una malaltia poc coneguda i que afecta moltes persones.

Sobre el futur més proper, Flotats explica que està pensant a continuar amb el seu treball de recerca sobre el lupus i a fer un treball de recerca sobre el lupus a Espanya i al Regne Unit.

Els dos grups guanyadors, amb Marçal Riera, Marçal Fiol, Mireia Espert, Nària Marañón, Dani Trindade i Edo Martínez

Ciència i comunicació

Alumnes de l'Escola Pia de Granollers rebent dos premis pel projecte Reimagina la Ciència.

representació de dibuixos a l'estil presentat amb una veu narradora, mentre que l'altre ha decidit comunicar els continguts en un format concís.

Dues de les professores que ho han coordinat, Montserrat Guzmán i Teresa Coma, expliquen que tots els alumnes de tercer d'ESO han participat i que han aprofitat l'activitat per posar a punt la signatura de Natura.

«Han dividit els 120 alumnes en 30 grups cooperatius i heterogenis de quatre persones», expliquen que la metodologia venia molt pintada. «Ens van crear un guió de cada una de les quatre fases que havíem de seguir. Les tres primeres eren de con-

Es un projecte que barreja les disciplines de la ciència i l'audiovisual

gut molt teòric que els alumnes havien d'aprendre per poder fer una presentació», diu Montserrat Guzmán. En els clàssics que hi ha hagut de fer el primer semestre en hores extraordinàries han tractat un tema per entendre que suposa fer un assaig científic. «Van rebre la proposta per correu i ens vam animar. A més, acabarem de fer el sistema immunitari i ens ha-

anat molt bé. La base científica la tenim, han fet moltes coses: l'efecte placebo, les fases de l'assaig científic, randomització, la legislatura, la temperatura... La ciència no és només el que surt als llibres, darrere hi ha molta gent investigant, hi ha indústria que fa que aquesta investigació torni a arribar al consumidor, hi ha també la part ètica i la part de voluntariat en l'assaig científic... El projecte els ha dut, inevitablement, a fer referències a la vacuna contra la Covid-19. Alguns parròls de grup m'han preguntat com és que, si de mitjana una vacuna és de 10 anys de desenvolupament, que s'ha posat molta més facilitat a aquest tipus d'actes mèdics, com és que ara

amb un any l'han fet? És el concepte d'un assaig científic», diu Guzmán. Per treballar aquesta idea explicaven que hi havia un encreu per als alumnes que els feia buscar un medicament (suggerit pel Parc Científic de Barcelona) que tracta una malaltia molt concreta: el d'un càncer infantil. L'objectiu era veure com s'ha treballat aquest medicament i com s'ha col·laborat amb hospitals de tot el món.

LA CLAU AUDIOVISUAL

Encara que la ciència és la base del projecte, la branca audiovisual i tècnica ha tingut un paper molt rellevant, ja que la finalitat del projecte és saber comunicar ciència. Alguns dels alumnes han trobat motivació, sobretot, en la part final del projecte quan havien de materialitzar tot el que havien après. Les professores fan palès aquesta voluntat de barrejar disciplines diferents. «En els materials que ens facilitaven des de Reimagina la Ciència ens explicaven com havíem de fer un guió teatral. Ha estat un projecte en el qual els alumnes han après a utilitzar tota mena de programes audiovisuals i pràcticament l'entrega i la posada en escena», afirma Guzmán. De fet, no només ha participat en aquesta activitat el docent relacionat amb les ciències naturals, sinó que el professor de humanitats i socials ha aconseguit i corregit l'estructura dels guions. Teresa Coma explica que aquest any es contempla incloure un nou itinerari de tercer d'ESO, en aquest cas de Nanociència. Ja tenim tradició per aquest camp, expliquen, amb visites i xerrades constants a l'escola. Aquest any amb la Covid-19, però, tot ha estat a través de videotutorials, i el que més els ha sorprès en general és que s'ha posat molta més facilitat a aquest tipus d'actes mèdics.

Bioliquid Innovative is a biomedical company focusing on women's health. It aims to develop new tools to isolate foetal and tumour cells from a liquid biopsy in order to improve non-invasive prenatal testing and the prognosis, treatment and monitoring of gynaecological cancers.

DeepUll Diagnostics aims to combat sepsis and antibiotic resistance with a quick, automated system based on artificial intelligence.

Laboratories open to the community

Self-service laboratories, equipment and scientific infrastructure

The Park provides its users with laboratories, equipment and scientific infrastructure on a self-service basis. These laboratories are managed by Park staff who support users and ensure the services operate properly and suit the research requirements of companies and research centres alike.

Online booking

Facilities can be booked online by users, which saves time both for them and for the technical team supporting the spaces.

- System to acquire and analyse images for Western Blot ODYSSEY CLx

Infrastructure and equipment

6 clean rooms

2 bacterial culture rooms

2 yeast culture rooms

1 chemical analysis laboratory

9 rooms with centrifuges

11 rooms with standard equipment

5 rooms with shaker-incubators

1 climatic chamber at 37°C with shaking platforms

9 cold chambers, 5 ultrafreezer rooms and 2 rooms with cryotanks

6 rooms with spectroscopy equipment

3 microscope rooms

1 histology room

3 dark rooms

1 laboratory equipped for protein purification

Laboratory material washing service

New microscope room

A new space has been furnished in the Cluster I building for a new microscope room. This space is exclusively for working with microscopes, so the conditions are better for using and handling the equipment, with controlled access for trained authorised users only.

New cryogenics room

A new cryogenics room has been created with 32 m² of space for nitrogen containers for labs at the Park. The room, in the Cluster I building, has all the facilities needed for automatic container filling and controlled access only for users with tanks stored there, plus the option to put a remote alarm on the containers.

New access to liquid chromatography equipment (pilot programme)

HPLC and uPLC devices have been made available as self-service or with support from technical staff as part of a pilot programme. The continuity of this service will be decided based on use.

Radioactive facility

Two fully equipped central radioisotope laboratories with qualified technical support are available to users for handling molecules marked with radioactive isotopes.

Optimum safety and radiation protection measures

Radioactive Activities Coordination Service authorised by the Government of Catalonia and the Spanish Nuclear Safety Council

Access restricted to authorised users

118 users

190 m² of shared-use laboratories

300 m² of laboratories for authorised users only

Course “Training to Prevent Risks with Ionising Radiation at IR-PCB”, which is obligatory for anyone who uses the facility

Investment to upgrade equipment

€42 m invested

- Perkin TriCarb 4910 vials beta counter

Infrastructure and equipment

Cell culture area

Animal experimentation area

Counter room: Beta and gamma counters

System for capturing digital images using radioactive sample lasers

Waste storage

Cold chambers

X-ray diffraction room

X-ray irradiator for biological samples

Drosophila

Two equipped fly rooms allow users to conduct research with *Drosophila melanogaster* as an experimental model. There are also climate chambers and cabinets for growing flies and a preparation room for the fly culture medium.

+ 29.000 feed
tubes per month

Infrastructure and equipment

Episcopic stereo microscopes

CO₂ facility

Climate chambers and cabinets (at 18 and 25°C)

4°C chambers to preserve the prepared food

Kitchen for making and supplying the culture medium

Scientific platforms

The Park has three scientific platforms featuring scientific and technical staff and their own equipment that provide services to entities inside and outside the Park. These platforms give users access to cutting-edge scientific services which are essential to the research they conduct. Being part of the Park ecosystem fosters interaction between internal staff and users, optimising joint research.

Evolution of scientific platforms (income in thousands of €)

Animal House

The Park manages its zoology facilities to provide a benchmark platform for research with live models.

2.600 m²

2 SPF animal facilities for rodents (rats, mice, hamsters and guinea pigs)

1 animal facility for *Xenopus laevis* models

1 isolation zone for gnotobiotic mice

12.000 animals housed

365 accredited users

Investment to upgrade equipment

€115 m

invested to upgrade equipment and software

- VetScan dry chemistry analyser
- Biosis ventilation units
- Racks ventilated with Biosis mini-isolators
- Laminar flow cabinets
- Anaesthesia equipment
- SPF clothes dryers
- Modifications and improvements to ANIBIO software

Guarantee and quality

The Park is a signatory of the Transparency Agreement on Animal Research promoted by the Spanish Confederation of Scientific Societies in collaboration with the European Association for Animal Research.

We have an Ethics Committee for Animal Research, designated as an Authorised Body for evaluating animal research projects by the Government of Catalonia with over 68 projects evaluated in 2021.

Work begun to get additional accreditation of animal welfare and quality:

Animal house users were presented with the project to obtain AAALAC (Association for Assessment and Accreditation of Laboratory Animal Care) certification, which is the highest quality standard for institutions working with laboratory animals.

International publications

Single loss of a Trp53 allele triggers an increased oxidative, DNA damage and cytokine inflammatory responses through deregulation of IκBα expression.

Marruecos, L., Manils J, Moreta C, Gómez D, Filgaira I, Serafin A, Cañas X, Espinosa L, Soler C.

Cell Death Dis. 2021 Apr 6;12(4):359. doi: 10.1038/s41419-021-03638-3.

Proteomics Platform

The Proteomics Platform provides guidance and technology to carry out studies ranging from small- or large-scale identification and characterisation of proteins to quantitative analysis of their level of expression. The wide range of services offered through this platform adapts to the needs of researchers at public institutions and at companies.

The platform is a member of the Spanish proteomics network ProteoRed-ISCIII, which is part of the Carlos III Health Institute: PRB3 – Biomedical Resources Network Platform.

Toxicology Platform

The Toxicology Platform provides services for innovation, research and development, assessing efficacy, ADME, experimental in vitro and in vivo toxicology, ecotoxicology and microbiology, in order to guarantee the safety of a wide range of products from organisations and companies working in the pharmaceutical, biotech, cosmetic, veterinary, food, healthcare, personal hygiene, chemical, nanomaterial and environmental fields.

Guarantee and quality

Its facilities, equipment and qualified staff make it possible to carry out experimental studies, analytical determinations, histotechnology, and expert assessment reports according to best laboratory practices (BLP) for healthcare, following all current national and international guidelines for each sector and regulatory agency.

Part of the team are members of the Research Group in Toxicology (GRET) with the Toxicology Unit in the UB Pharmacy Faculty.

Winner of the Best Poster Award

The poster *“Remote GLP Study Inspections: From an Integration Tool for People with Physical Disability towards an Opportunity for COVID-19 Pandemic Disruption”*, by the team UTOX-PCB, QAU-GLP-PCB and SQR-UB, presented by Dr Carme Navarro, won the Best Poster Award at the 37th annual congress of the United States Society of Quality Assurance (SQA) with the content on integrating people with reduced mobility and the advantage of this tool in tackling cases of the pandemic and other contingencies.

Research Projects

COLLABORATION CHALLENGES RTC2019-007070-1 titled “Investigation of the potential of new molecules for the treatment of fibrotic diseases II (DEFIBER II)” to assess a preclinical safety packet for a new antifibrotic drug to move into the clinical phase, 2020-2022.

MIG-20201012: CULTUREDMEAT titled “Investigation of the meat of the future destined to the prevention of colon cancer and dyslipemias” project that assesses the safety of new foods before they can be commercialised, 2020-2023.

GAT Biosciences is advancing microalgae synthetic biology towards disruptive solutions for the recombinant production and delivery of biological drugs. It is developing new non-injected biopharmaceutical products that are much more affordable for highly prevalent chronic and infectious diseases.

GAT Therapeutics is a biopharmaceutical company that focuses on developing treatment for fibrosis and other ageing-related diseases.

General Services

The Park provides general services to enable users to focus on their value added: innovation, research, training, etc.

Meeting and events rooms

13	meeting rooms for 4 to 40 people
2	visiting rooms
1	Auditorium (Antoni Caparrós) for up to 140 people
1	Room (Fèlix Serratosa) for up to 70 people
1	Multipurpose room (Dolors Aleu) for up to 120 people

Audiovisual equipment: LCD screen or projector and computer

Audiovisual technical support

Flexible booking in two-hours slots

Catering service

Other rooms

- Nursing room
- First aid room
- OpenLab

New Quiet Room

As a pilot programme, a Quiet Room has been created to give users a library-like space where they can work quietly in a calm environment.

7.936
hours booked in 2021

Audiovisual improvements

Installation of a camera system for on-line seminars and video conferences in the events rooms. The system is integrated into the microphones and megaphones in the room, so remote participants get clear sound and can be heard by those in the room in real time. This installation is fully compatible with the most commonly used video-conferencing software, such as Teams, Zoom, etc.

Renovation of Changing Rooms

The changing rooms have been fully renovated with a total of 8 showers and 180 lockers.

Access control and CCTV perimeter surveillance

Fire and intrusion detection

Centralised alarms for general HVAC, freezers and cold rooms, main power and UPS power

Phone and computer network

- Access to the scientific ring for public organisations. Internet connection for companies
- Ibercom Corporate Telephone Network with Telefónica and option to hire other operators
- IP Services
- Wi-Fi network, VPN and shared printers
- Server hosting service in the data processing centre
- Secured systems to minimise the risk of using communication networks
- Microcomputer service

Investment to upgrade equipment

€127m

to update the core network that will allow for computing up to 40 Gbps for the equipment on the local networks provided to organisations at the Park.

€84m

to update the fibre optics network in the Cluster building to give it the physical infrastructure needed to provide 10 Gbps service to the labs in that building.

€17m

to improve the coverage and capacity of the Wi-Fi network in all buildings at the Park.

Goods distribution

Daily service to receive and deliver goods:

33.964 items received each year

Cleaning

Daily cleaning of common areas and spaces for users only:

53 daily routes

Maintenance and Works

Designing and coordinating user space refurbishment

Facility maintenance, conservation, improvement and operation

Supplying of electricity and softened deionised water

Supplying of laboratory gasses Dispensing liquid nitrogen and dry ice

Yearly projects:

8.818 preventive maintenance

8.354 corrective maintenance

2.626 user-requested maintenance

Investment for new or upgraded equipment and infrastructures

€500m

to replace 3 large machines to produce cold water for improved HVAC performance, saving approximately €100.000 per year on electricity.

€46m

to install a new compressed-air system serving the Cluster I and II buildings.

€40m

to install a new humidification system in Tower I.

€11m

to renovate the water-softening system with back-up power.

€57m

to weatherproof the roof on the Helix building.

Furnishing de 1.500m² of new lab and office space

In 2021, works were carried out to furnish approximately 1.500 m² of space, already made available to clients, and other works that will be completed in 2022, so occupancy will be counted towards the following year.

These works were possible thanks to the Park's investment to furnish new spaces, specifically providing twelve new laboratories in the Cluster II building, some of which have been used for the companies accelerated through the BCN Health Booster programme.

The rest of the works were in the Cluster II building, through investment covered by the users themselves.

With this growth, the ground, first and second floors are complete and there are only some spaces left on the third floor and in the basement.

Apart from furnishing new spaces, the standard works to renovate spaces continued, both requested by users and paid for by the Park, to adapt spaces to current needs.

Cleaning service for lab clothes

Service includes 3 personalised lab coats per user, cleaned weekly.

Shop

Fungible lab and office materials.

Supplying of laboratory and technical gasses

Supply of standard technical gasses: nitrogen, CO₂, oxygen, argon, helium, hydrogen, synthetic air, compressed air, vacuum, etc.

Waste management

 186,4
tonnes of biological waste per year

 180
tonnes of chemical waste per year

Selective door-to-door collection of laboratory waste

User training

Centralised management of office and other waste

New Multipurpose Room in the Helix building

A new multipurpose room has been furnished on the second floor of the Helix building. It has a microwave, vending machines, drinking fountain, and tables and chairs for extra eating space at lunchtime. It also features a soundproof booth for making calls and the room can be used freely throughout the day, without booking or exclusivity, for other activities like informal meetings or relaxing.

MiMark is a spin-off of the Vall d'Hebron Research Institute (VHIR) that aims to improve women's health by developing innovative diagnostic studies to address unresolved clinical issues related to gynaecological conditions. The first product is WomEC, an in vitro diagnostic test that provides a precise, low-cost, minimally invasive diagnosis of endometrial cancer, while also providing guidance on the best surgical treatment.

Nuage Therapeutics is a spin-off of the Institute for Research in Biomedicine (IRB Barcelona) and ICREA that focuses on discovering new drugs for therapeutic targets that, given their structural properties, have been hard to tackle previously.

Spaces

The Park has 32.942 m² in office and laboratory space for its users.

The Park has maintained full occupancy of its furnished spaces (96%) and has furnished approximately 1.500m² of new spaces, mainly laboratories. This brought a 6% increase in occupancy compared to the previous year.

Change in occupancy of office and laboratory spaces (m² net floor area)

Current occupancy and growth spaces

Currently, 89% of all available space at the Park is occupied, with unfurnished space available for clients in the Cube building, approximately 570m² of unfurnished lab space on the third floor and basement of the Cluster II building and roughly 150m² of office space.

Park completes coffee corners project, recognising its international community

The PCB has a community of roughly 3.000 people, with 68 nationalities and foreigners making up 18% of the whole community of users of the Park ecosystem. Of this 18%, 10% is from the European Union and the remaining 8% from the rest of the world, with a wide representation of continents and cultures. The PCB wanted to recognise this wealth and diversity with a small tribute to the largest groups of foreign nationalities among the workers.

To do so, and to provide additional common areas, several artistic interventions were carried out in spaces in the Cluster II building, known as the coffee corners. The Park has turned these spaces in the corridors of the building into meeting points for its community.

Six coffee corners have been decorated with different artistic interventions. The spaces pay tribute to the home countries of the Park's largest foreign communities: India, France, Italy, Germany, the United Kingdom and Portugal. The spaces have a large vinyl map of a city from the country, designed by Canadian artist Jazzberry Blue, and an illustration of a typical café in each country by local artists Giulia Neri (Italy), Eric Puybaret (France), Ayeshe Sadr & Ishaan Dasgput (India), Miranda Sonofriu (United Kingdom) and Marusha Belle (Portugal).

Now the coffee corners are part of the daily routine of many Park users, who say they are a place to meet up, take a break or read, and for some, even, to feel a bit closer to home.

ONA Therapeutics is a biotechnology company, a spin-off of ICREA and the Institute for Research in Biomedicine (IRB Barcelona), that specialises in the discovery and development of therapeutic biologics targeting lipid metabolism to treat advanced-stage cancer.

Oncoheroes Biosciences is a biotechnology company that focuses exclusively on drug discovery and development for childhood cancer. Their vision is to help young cancer patients and create value in the process.

Research in Society Programme

Bringing live science to all audiences is the Park's commitment to society through the Research in Society Programme.

Workshops

The workshops kicked off in September, with the new school year and return to in-person activities at schools. Identifying a murderer using DNA analysis or understanding diabetes, Alzheimer or arteriosclerosis through experimental workshops at the Park is one of the programme's goals. Working researchers welcome schools to the Park every week, giving them a tour of the facilities and conducting one of nine science workshops. At the Park, students and teachers get access to scientific equipment that is hard to find at educational centres and the unique experience of meeting science staff working on real projects.

BATX2LAB

The Park hosted first-year Baccalaureate students who are doing their Research Project (RP) in the labs of organisations established at the Park. The organisations make their research staff available to the students, overseeing their projects and providing the materials needed.

Online guided tours of the Barcelona Science Park

This initiative was created under the slogan “Una bona sortida per a temps poc presencials!” (a good option for virtual times), offering a dramatised tour of the Park facilities and equipment streamed live for students from Year 7 through Baccalaureate. A tour of the 100.000 m² that gave participants a close-up look at the research being done by Park organisations.

28 schools
1.409 participating students

Reimagina la Ciència: Assajos clínics, investigació i medicaments!

After the great success of the first edition of Reimagina la Ciència, with Novartis Farmacèutica and Big Van Ciència, the Park launched the second edition of this programme that aims to help teachers include concepts related to clinical trials in the classroom through e-learning tools.

Geared towards students from Year 9 through Baccalaureate, the project trained teachers on the importance of clinical trials and refuted the false myths, highlighting the need for society to take part in these studies for drug development. The purpose is for teachers, after they've been trained, to share the concepts in the classroom and for students to create their own story in an artistic video to show what they've learned.

Barcelona Science Festival

For the City and Science Biennial, which aims to bring science to the people and democratise access through activities for all audiences, the Park took part in the 14th Barcelona Science Festival and hosted one of the 120 activities offered through this programme. In this case, the workshop was called “Investigating how Antigen Tests Work” and helped explain to participants the difference between antigen and antibody tests and how immune response works. The participants did an experiment to detect coronavirus proteins, with the results showing high, medium or low immunity.

The ecosystem

The Park Community is made up of over 2.900 researchers, technicians, entrepreneurs and businesspeople in a total of 123 organisations. These professionals mainly work in the health sector: pharmaceuticals, biotechnology, medical devices, nutrition and cosmetics.

6 research centres

- **Institute for Research in Biomedicine** (IRB Barcelona), created in 2005 and located at the Park from the very beginning. It has 28 research groups and over 380 research staff.
- **Institute for Bioengineering of Catalonia** (IBEC), established in 2005 and based at the Park from the beginning, carries out multidisciplinary research of excellence on the frontiers of engineering and the life sciences to generate knowledge and help solve health issues. It has 22 research groups and over 320 research staff.
- **Molecular Biology Institute of Barcelona** (IBMB-CSIC), created in 1998 and located at the Park since 2003. It has 28 research groups and over 150 research staff.
- **National Centre for Genomic Analysis** (CNAG-CRG), created in 2009 and located at the Park from the very beginning. It has a sequencing unit and a bioinformatics unit, plus 6 research groups doing genomic analysis projects. Over 90 research staff in total.
- Research groups from the **University of Barcelona** and the **Institute of Cosmos Sciences of the University of Barcelona** (ICCUB).
- Rheumatology Research Group is a research group of the **Vall d'Hebron Research Institute** (VHIR).

OneChain Immunotherapeutics is a spin-off of the Josep Carreras Leukaemia Research Institute and ICREA founded by Dr Pablo Menéndez. The company's main goal is to improve people's health by developing new immuno-oncology therapeutic tools to treat a wide range of neoplasms, mainly childhood leukaemias that are rare or have few therapeutic alternatives, contributing innovative, viable pharmacological solutions.

Evolution of the Park Community

The Park Community has roughly 3.000 professionals, with a well-balanced gender ratio, average age of 38 and 18% international users from 68 different nationalities.

The Park has a very balanced population, with 55% women, 44.7% men and 0.3% gender non-binary people, which has held steady over the past 14 years.

Gender non-binary and chosen name

User registration forms have been changed to include gender non-binary and chosen name. Gender non-binary applies to people who do not identify as a man or a woman and who may identify with a third gender or none of them.

The forms now also include chosen name for trans people. Chosen name is the name that should be used on all communications, documents and identification while waiting for an official name change on Spanish ID documents.

If these options were not available when a user was registered and they would like to identify as gender non-binary or provide a chosen name, they can do so at reception.

Demographic data on age, gender and sectors

Average age 38 years old

Age distribution by gender and public research sector⁽¹⁾ and other activities at the Park⁽²⁾

⁽¹⁾ Public research includes: IRB Barcelona, IBEC, IBMB-CSIC, CNAG-CRG, Vall d'Hebron, University of Barcelona research groups and the CCiTUB. ⁽²⁾ Other: all other organisations at the Park The percentage of non-binary people is well under 1% and could not be represented in this classification.

The average age at the Park is 38. The largest age group is the under-30s (31%), dropping gradually as age increases to just 15% for over-50s.

Female presence based on age

In public sector research, the gender gap varies by age. While the under-30 population has more women than men (12% women vs 8% men), as age increases the female presence drops, with more men in the over-50 age group (3% women vs 4% men).

The same trend of losing more women than men is also observed in the private sector, although it is less marked.

68 Nationalities

Spain EU (excluding Spain) Other

Top 5 Nationalities

The number of nationalities has increased since 2020, up from 59 to 68. Nevertheless, the five nationalities with the biggest communities at the Park have remained the same in recent years.

Below is a selection of the main media impacts of organisations at the Park in the media in 2021. The year after the pandemic, many companies at the Park continued growing in turnover and team, with some success stories acquired by other businesses and attracting capital in large rounds of funding. There were also significant scientific discoveries, drugs licensed and highly promising new start-ups and spin-offs that joined the Park. This visual press clipping illustrates all those impacts. To read all the Press Releases the Park generated, go to the Press Room on the Park website.

Oncoheroes licencia su fármaco con Notable Labs

Gabriel Trínadea, Barcelona

Oncoheroes, start up cofundada per l'empresador català Ricardo García en Boston (EEUU) i amb oficines al Parc Científic de Barcelona (PCB), acaba de dar un important pas adelante en el desarrollo de su fármaco para el rhabdomyosarcoma infantil, el cáncer de tejidos blandos más común en niños y adolescentes.

La start up ha licenciat el candidato volasertib con la farmacéutica norteamericana Notable Labs para su desarrollo clínico en adultos. Se trata de una empresa con sede en California especializada en terapias de precisión que desarrolla medicamentos oncológicos. Ni el importe de la operación ni los detalles sobre futuros pagos han sido desvelados por las partes.

Notable aprovechará su plataforma de medicina predictiva de precisión para identificar y seleccionar pacientes que respondan a volasertib y acelerar el desarrollo clínico con ensayos clínicos ya en fase II/III en leucemia mieloide aguda y otros cánceres.

El cofundador de Oncoheroes Ricardo García.

El volasertib es un medicamento diseñado por Boehringer Ingelheim para la leucemia mieloide aguda, hasta que la empresa decidió dejar su desarrollo por motivos estratégicos. En 2019, Oncoheroes obtuvo la licencia mundial y exclusiva del fármaco con el objetivo de continuar el desarrollo clínico en los pacientes oncológicos jóvenes. Oncoheroes ha conseguido la designación de medicamento huérfano y de enfermedad pediátrica para por parte de la FDA, el regulador de EEUU.

Oncoheroes ha iniciado ya la producción de volasertib y está trabajando con el Consorcio Europeo de Terapias Innovadoras para Niños con Cáncer (ITCC) con el objetivo de comenzar en 2022 un ensayo clínico de fase Ib/II en rhabdomyosarcoma pediátrico, liderado por la Universidad de Birmingham y el Cancer Research UK.

El origen de la empresa se remonta a principios de la década pasada. Ricardo García se estableció en Estados Unidos en 2011 cuando emigró en busca de soluciones médicas para el tratamiento de su hijo, enfermo de cáncer. Tras tener éxito en la intervención, García se unió a Cesare Spadoni —otro padre que tuvo que enfrentarse a un cáncer infantil con un desenlace trágico— en varios proyectos sin ánimo de lucro, como la creación de la Richi Childhood Cancer Foundation.

Desde su fundación en 2017, la compañía ha levantado 8,8 millones de dólares (7,7 millones de euros). Recientemente, The Andrew McDonough B+ Foundation ha vuelto a invertir en la firma.

CRISI DE LA COVID-19 EL PLA DE RECUPERACIÓ

Institut de Bioenginyeria de Catalunya

Teràpies personalitzades

ENIA · L'Institut de Bioenginyeria de Catalunya vol desenvolupar nous biomodels, reproduccions del cos humà per a fer recerca. **OBJECTIU** · Els miniórgans permeten desenvolupar i estudiar els fàrmacs de manera més ràpida i eficaç

L.B.

BARCELONA

Com hem vist amb la Covid-19, una mateixa malaltia afecta de manera molt diferent cada persona en funció de la seva genètica o el seu sistema immunitari, entre molts altres factors. Els professionals sanitaris i el món científic ho saben de feia temps i intenten avançar cap a la medicina personalitzada per deixar d'orientar tractaments genèrics i desenvolupar fàrmacs i teràpies que s'adaptin a un grup de pacients amb les mateixes característiques. L'Institut de Bioenginyeria de Catalunya, l'IBEC, lidera un projecte que aspirarà a la Next Generation que vol convertir Catalunya en un important centre de recerca en el camp de la medicina individualitzada.

IBEC

BARCELONA

Com explica Josep Samitier, director de l'IBEC, per trobar noves teràpies es poden estudiar fàrmacs que tenen altres usos terapèutics, amb la passat amb el coronavirus, però també cal desenvolupar nous sistemes de biomodels, reproduccions de parts del cos humà. Un exemple són els òrgans, òrgans fetes al laboratori amb cèl·lules d'origen humà i sistemes 3D que tenen les mateixes característiques i funcionalitats que un cor, un ronyó o un cervell. Com explica Samitier, tenir aquests miniórgans permet de desenvolupar i estudiar els fàrmacs de manera més ràpida i eficaç i permetrà fer passos de penat en el tractament de tot tipus de càncers, malalties minoritàries o neurodegeneratives.

en aquests sistemes de biomodels, però no Catalunya. "Aquest era un projecte que feia temps que s'havia plantejat, però mai s'havia pogut desenvolupar en el camp oncològic i en recerca biomèdica", explica Samitier, el director de l'Institut de Bioenginyeria de Catalunya. "Si els fàrmacs es desenvolupen a través de fonts europees pot servir perquè tinguem aquestes dades que estem solant a la nostra recerca".

La col·laboració publicoprivada de la base del projecte, que té un pressupost total de 400 milions d'euros. Hi ha implicacions de l'Institut de Recerca Biomèdica, hospitals i universitats, el Barcelona Supercomputing Center, el Sàncoró Alba i empreses de Bioact i Catalana de Health Tech.

G.T. Barcelona

BARCELONA

La companyia de serveis farmacèutics Farmaprojects anuncia avyer la apertura de un nuevo laboratorio con certificación GMP (good manufacturing practice) en el Parc Científic de Barcelona (PCB) para el control de calidad de medicamentos.

La empresa, con sede en la capital catalana, indicó que, con esta operación, "refuerza su posición como referente en la licencia, fabricación y suministro de medicamentos genéricos farmacéuticos para su comercialización en Europa y terceros países".

Farmaprojects, que fue fundada en 1988, se ha integrado recientemente en el grupo polaco Polpharma. La compañía ofrece un amplio abanico de servicios para la industria, como la licencia de dossiers, la fabricación por contrato y el apoyo completo

en el registro farmacéutico y de propiedad intelectual. La empresa cuenta con una cartera de clientes integrada por 120 compañías farmacéuticas de medio centenar de países.

En 2020, la filial de Polpharma facturó 17,8 millones de euros, apenas un 1,1% menos que un año antes, y obtuvo un resultado de 245.154 euros, frente a los 35.000 euros en números rojos de 2019.

La alemana Evonik adquiere Infinitec Activos

La compañía alemana de especialidades químicas, Evonik, ha adquirido la biotecnológica **Infinitec Activos**, con sede en el Parque Científico de Barcelona y centrada en la investigación, desarrollo, producción y comercialización de principios activos y sistemas de liberación de última generación para la industria cosmética.

La operación, formalizada el pasado mes de julio y cuyo importe no ha trascendido, supone la integración tanto de Infinitec como de Naturethric (su productor de materias primas sostenibles), en la línea de negocio Care Solutions de la división Nutrition & Care de Evonik, lo que permitirá a la multinacional reforzar su negocio de ingredientes activos de base natural y sistemas de liberación innovadores y aumentar su volumen del 25 % actual al 50 % en 2030.

La adquisición comprende a los 47 profesionales que trabajan en los laboratorios de I+D de Infinitec y Naturethric en el Parque Científico de Barcelona y en su planta de fabricación de Montornès del Vallès (España). Los cofundadores, Alfonso Hidalgo y Josep Maria Borrás, conservarán sus cargos ejecutivos al frente de la compañía.

Tras la operación, Infinitec ampliará sus instalaciones en el Parque Científico de Barcelona con 200 m² adicionales, por lo que dispondrá de un total de 300 m² de superficie de laboratorio y oficinas. El proyecto supondrá una inversión de 500.000 euros y un aumento de la plantilla de un 50 %.

Infinitec Activos forma parte de la segunda generación de empresas incubadas en el Parque Científico de Barcelona (PCB). Inició su actividad en 2006 de la mano de dos emprendedores, Alfonso Hidalgo y Josep Maria Borrás, con el objetivo de desarrollar, producir y comercializar principios activos innovadores y sistemas de liberación de nueva generación para la industria cosmética. En 2010, Infinitec inició su propia I+D en el laboratorio del Parque Científico de Barcelona, y en 2018 inauguró su planta de producción de 1.500 m² en Montornès del Vallès (Barcelona). Hoy cuenta con una plantilla de 47 profesionales de siete nacionalidades, y 35 distribuidores en todo el mundo. En 2020 facturó 6,67 millones de euros, un 18 % más que el ejercicio anterior, y el 80 % de sus ventas provienen del mercado internacional. Entre sus clientes se encuentran firmas como La Prairie, Elizabeth Arden, Clarins, etc.

Alfonso Hidalgo y Josep Maria Borrás

La inversión en 'start-ups' del sector salud marca un récord en el 2020

La captación de fondos crece un 61% en un año y se sitúa en 226 millones

El crecimiento de la inversión en start-ups del sector salud en España se debe a la captación de fondos por parte de los inversores, que han aumentado su apuesta por este tipo de empresas. Esto se debe a la creciente importancia del sector salud en la economía global, especialmente en el contexto de la pandemia de COVID-19.

CONNECTA THERAPEUTICS

L'Agència Europea reconeix el seu producte com a farmac orfe per a la X fràgil

El farmac CTH120 de Connecta Therapeutics ha rebut l'aprovació de medicament orfe de l'Agència Europea del Medicament per al tractament de la síndrome X fràgil. Jordi Fàbrega, cofundador de Connecta, explica que aquest reconeixement "ajudarà a accelerar el desenvolupament científic i de negoci". Connecta va tancar el 2020 una ronda d'inversió d'1,7 milions d'euros liderada per Inveready i el programa CDTI Innvierte i en va rebre uns altres dos d'ajuda pública a través del consorci amb l'IMIM i el CRG en què participa./Redacció

La catalana Som Biotech ultima sus planes de salida a bolsa

La biotecnológica quiso dar el salto al parqué que obtiene financiación en 2020, pero la pandemia retrasó el proceso

La biotecnológica catalana Som Biotech retoma sus planes de salir a bolsa y se prepara para un inminente salto al parqué, según han confirmado diferentes fuentes financieras e informáticas. La compañía catalana está especializada en la investigación de nuevos sistemas de medicación que tienen una aplicación específica, con el fin de mejorar la calidad de vida de los pacientes. La compañía, fundada por Daniel Martí y Natalia Martí, se dedica a desarrollar biomateriales de alto valor para el sector biomédico.

La biotecnológica Moirai Biodesign ofrece su software para el diseño de ARN sintético

La biotecnológica **Moirai Biodesign**, una startup con sede en el Parque Científico de Barcelona, pionera en el desarrollo de soluciones basadas en ARN para impulsar el desarrollo de nuevas terapias y sistemas de diagnóstico, ha lanzado MoiraiFold, un avanzado software para el diseño de moléculas complejas de ARN.

La startup, liderada actualmente por Amadís Pagès (CEO), Ivan Dotu (CTO) i Daniel Poglayen (CPDO), pone a disposició de la comunitat científica esta herramienta de forma gratuita como servidor web.

Durante los últimos años, los científicos se han volcado en diseñar y crear nuevas moléculas de ARN sintético (que se sintetizan en el laboratorio) y mejorar las herramientas computacionales para realizar esta tarea, a fin de reducir el tiempo y coste de producción para el desarrollo de avances diagnósticos y terapéuticos. La aplicación terapéutica del ARN sintético es muy innovadora y tiene un gran potencial médico y farmacológico, ya que abre la puerta a una nueva generación de terapias a medida para ciertas patologías neurológicas, congénitas, oncológicas, neurodegenerativas, etc.: así como para el desarrollo de nuevos antibióticos y vacunas.

Si bien las vacunas basadas en ARNm (ARN mensajero) son la aplicación terapéutica más conocida actualmente, existen muchas otras moléculas de ARN con fines terapéuticos, como los siRNA (del inglés Small Interfering RNA) o los ASO (del inglés Antisense Oligonucleotide).

Gracias a metodologías de vanguardia de inteligencia artificial, como la programación con restricciones (Constraint Programming, CP) y la heurística de investigación Large Neighbourhood Search (LNS), MoiraiFold presenta nuevos conceptos de modelado que apuntan a superar cualquier otro enfoque en diseño de ARN funcional, al tiempo que incluye nuevas docenas de restricciones de diseño, medidas de calidad y mejora, además de las características para el control de la regulación del ARN de la expresión génica, como el cálculo de la eficiencia de traducción.

"En general, nuestro software de diseño de ARN supera todos los enfoques anteriores (tanto en velocidad como en número de estructuras resueltas). Esto allana el camino hacia la posibilidad de generar de manera eficiente moléculas de ARN altamente estructuradas que no pueden ser diseñadas por ningún otro software", afirma Ivan Dotu, CTO y cofundador de Moirai Biodesign.

Víctor Valls, CEO de Vesismint Health, a la sala de fermentació, a Barcelona.

Driving the Park Community

The Park worked hard again in 2021 to dynamise its ecosystem, which includes professionals with varied backgrounds and interests, choosing hybrid in-person and online events over the months with the strictest restrictions and postponing leisure activities like yoga, salsa and zumba until 2022.

Events, conferences and workshops

The goal is to give the Community the opportunity to listen, learn and debate on topics they are interested in and to encourage networking.

Access to grants and funding

In 2021, many companies in the life sciences sector were awaiting grants potentially channelled through the Administration. In May and July, in collaboration with ACCIÓ, two events were held, one focusing on the ACCIÓ services and grants for companies in the health sector and the other on funding, mentoring and networking tools for start-ups in the health sector. In October, with Biocat, there was an event on the Next Generation EU funds. There was also a talk to guide companies considering another possible path to funding: the stock market. This session was hosted by the Cuatrecasas law firm and focused on access to the BME Growth.

“A Day at the Park!” photo contest

Once again, the Park hosted its annual “A Day at the Park!” photo contest, the seventh edition. The photos, which must reflect life at the Park for users, are posted on Instagram and tagged #UndiaalPCB. First prize went to Laura Gómez Rubio, who works at the IBEC, with ‘Quan fas el que t’agrada estàs complint els teus somnis’ (When you do what you love, your dream is coming true) and the panel of judges chose ‘Green splash’ by Clara Borràs of the IRB as the runner-up.
